bandoxal

Creative partner of architects and designers.

***bandoxal** is a range of coloured anodised aluminium surfaces for the decorative sector.*

There is an increasing number of objects that characterise the everyday environments in which the polished and anodised aluminium **bandoxal**, produced by the ALMECO GROUP, expresses itself. Its applications range from design to architecture, from furniture to accessories, from automotive to boating, from cosmetics to the electrical and electronics industries. The very same features of this product facilitate its use.

Lightweight, flexible, resistant, environmentally friendly and completely recyclable, **bandoxal** exhibits exceptional durability over time. Its surface is homogeneous and free of iridescence, its colour is absolutely uniform and its chemical and mechanical properties are unique. The high quality of the product is combined with the widest range of colours, textures and thicknesses. Ductile, malleable, anti-static and

heat-resistant, it combines perfectly with other scratch-resistant materials. Easy to work, it adapts to various needs expressed by creativity, giving life to objects of great appeal thanks to its brightness. With **bandoxal**, a technical material such as aluminium acquires special aesthetic connotations. This results in surfaces that are adapted to the most different fields of application, giving value to designers' projects.

Colours and finishes

bandoxalpro[®]

Surfaces that vibrate with light.

*Satin or reflective,
with textures of
great material effect.*

***bandoxalpro** gives life
to surfaces and objects
that communicate
originality and
dynamism.*

The variety and range of **bandoxalpro** surface finishes is able to enhance buildings and interiors that are very different from each other, thanks to the different ways in which light dialogues with aluminium and makes it vibrate, giving it a particular materiality.

bandoxalpro ranges from a bright and luminous mirror finish to a satin

or brushed finish, which softens the light, thus creating an almost diaphanous effect. The extraordinary workability of aluminium and a full range of oxide thickness allow the creation of an infinite range of applications. Observing the multiple light effects is fascinating.

bandoxaldecor™

An infinite range of colours.

Colour is becoming increasingly important in the creation of interior environments.

bandoxaldecor shows no limits to the imagination.

Designers are constantly looking for materials that can reproduce the rich variety of colours found in nature but they also propose new ones that are capable of giving a touch of originality to their creations.

bandoxaldecor is the answer to both these needs, thanks to the infinite range of colours that are

ever-changing and always in line with the most current design trends. The warm, earthy colours are paired with cool and metallic tones in a luminous rainbow. Its ability to replicate other metals is extraordinary: from titanium to steel, brass to copper, tin to bronze, silver to gold. A world of colours to be discovered.

bandoxal^{pro}®

Combine
great
resistance
and aesthetic.

Finally you can take advantage of magic aluminium touches in every architectural environment, no matter if you work indoor or outdoor.

bandoxal^{pro} gives a full range of possible surfaces, including an assortment of electro-colours.

The most engaging projects deserve the highest standards of durability, constancy and tolerance. **bandoxal^{pro}** provides aesthetical and technical surfaces with a highly resistant anodizing layer up to 25 micron. To minimize joints and holders, metal gauge up to 3mm thick and 2,000mm wide are available in a wide palette.

Architectural facades

Indoor solutions

The elegant metallic range allows the imagination to flow freely since the versatile material advantageously replaces other metals such as copper, brass and steel. It also offers a broad selection of finishes: matt, satin, brushed and glossy. Tough and light, its durability over time is exceptional.

Open your mind, **badoxalPRO** is aluminium specially designed for outdoor use but many other applications are suitable for these surfaces, such as claddings for roofs and facades (i.e sandwich panels, honeycomb panels, composite panels, perforated panels, etc.) welded tubes, automotive, cassettes...Try it!

When looking for the greenest approach, **badoxalPRO** is the right answer thanks to our futuristic zero liquid discharge water treatment plant.

bandoxaldesign

Your colour,
your surface.

bandoxaldesign is the line of surfaces that were created to express a specific creative idea, in a unique way. Other tests give life to new and exclusive colours and textures which can fit with light and give shape to the designer's

original intuition, which first takes the form of prototypes and it is then completed in the industrial production.

bandoxalform

Aluminium
is made
flexible.

With **bandoxalform**, creating convex and concave objects and components made of coloured aluminium is finally possible. Thanks to their particular formability, these surfaces allow the combination of maximum design freedom with

bandoxaldecor enveloping colouring, in a continuous and creative process that does not require further manufacture and enables the provision of a product ready to be used.

bandoxalform: creativity takes shape.

bandoxalε

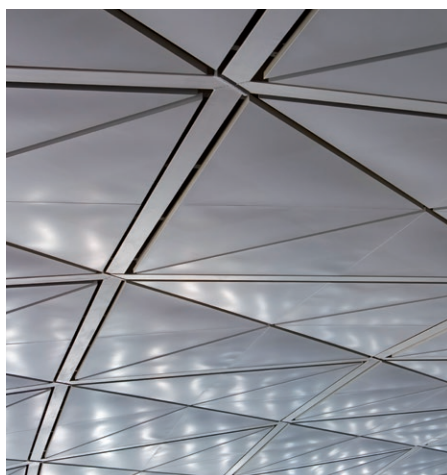

High
emissivity
and
lightness.

Climate control ceilings work is based on the principle of radiation. Cooling/heating coils are hidden behind the climate control panel which work as heat exchanger, ensuring a comfortable temperature gradient. The climate control panels look like any other suspended ceiling

panel and can be used also in retrofitting. For this application Almecco R&D developed a special high emissive finish in **bandoxalε**. Its reflectance spectrum is determined by the oxide layer and its thickness.

The ALMECO SERVICE

Alongside the specific needs of each client.

The customisation of the product and the service holds a strategic value in the decorative sector.

Each production made with creativity must be able to appear as unique to best interpret the exclusivity of the idea of the person that designed it. For this reason, the Almeco staff presents itself as a true partner of designers and companies to develop their original intuition, side by side. The choice is extremely expansive, ranging from the wide selection of **bandboxal** surfaces that are ready-made to the creation of a product with completely new colours and materials. The production can be carried out directly at the Group's various factories, using the most appropriate technologies among the many available to ensure the

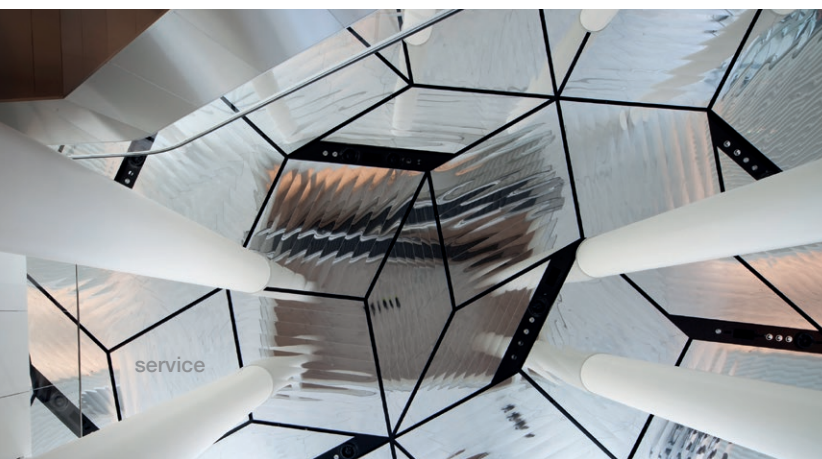

best results in terms of volume and quality. This guarantees a single point of contact that manages the entire process and keeps costs and timing under control.

Another advantage is the maximum customisation of the service.

The most advanced and efficient criteria of the supply chain allow the customer to have material ready to stock at each of the company's five headquarters and in the more than 60 partners around the world.

This proximity ensures extremely short response times, as well as a profound harmony with the tastes of fashion and design of each local market.
